

# Venio Review

Cost-Effective Solution

Faster, More Accurate Reviews

Higher Quality Results

Risk-Free Review & Production

## Key Benefits

### Highly Cost-Effective Review Platform

- Flexible licensing:  
No user-based cost
- No third-party add-ons required
- On-premises, cloud, or hybrid delivery

### Faster, More Accurate Reviews

- Powerful search, advanced filters and Query Builder to find what matters most
- TAR/CAL reduce data to be reviewed up to 90%
- Auto-collection for tiered reviews

### High-Quality, Risk-Free Review and Production

- PII/PHI Entity Identification reduces risk
- Native Excel Redaction protects financial data
- Secure data sharing and collaboration built-in  
Immediate insight and action with dashboards

## Fast, Easy-to-Use, Reliable, and Cost-Effective Review Platform

Venio Review enables legal review and investigative teams to rapidly review millions of documents and find the information most relevant to the case. With Venio Review, you don't need expensive stand-alone review-only tools that require manual data imports and third-party integrations, or tools that force you to adopt a rigid deployment and licensing model. Venio Review is fast, and it eliminates the risk of sensitive information being leaked or accidental loss of important documents.

Venio Review is a highly intuitive and easy-to-use solution that can be deployed on-premises, in your cloud, or provisioned as a SaaS service. It delivers everything you need to load data from any processing tool, quickly search and tag millions of documents, do native redactions, perform entity extractions, and prevent PII/PHI, financial data, and business secrets from being leaked. (Venio Review is a built-in capability for Venio Cloud and VenioOne users, and requires no manual data imports.)

When provisioned in the cloud, Venio Review has built-in, enterprise-grade security that provides an additional layer of safety beyond the legendary security features and processes in AWS to give you the peace of mind of knowing your data is safely stored behind firewalls and multi-layered security protocols.

With Venio Review, you can onboard new clients and cases within minutes and without having to manage expensive infrastructure, people, or licenses.

## Key Features

### Single Solution to Your Review Needs

Venio Review has a purpose-built architecture to support diverse case needs with no third-party integrations required. With built-in batched review, email threading, and viewers for social media, multimedia, PDF, and transcript file types, Venio Review is the full-featured review platform that your review teams can start using today.

### Fast, Intuitive Search to Find Important Information Quickly

Venio Review features fast and powerful search capabilities and an easy-to-use Advanced Query Builder to generate complex search queries. Powerful filters give immediate insights into the dataset and help refine searches. Saved Searches, Search History, and Dynamic Folders help you get your job done faster and with confidence. An intuitive interface, along with comprehensive user manuals and trainings, empower your teams to work more efficiently and without the need for constant project management support.

### Native Redaction and Entity Extraction Reduces Risks

Native Excel redaction eliminates the risk of exposing financial data and provides major time-savings in the review process. The ability to highlight and redact native files within Venio Review means that files don't have to be reviewed manually outside the platform or from jumbled text documents. Entity extraction enables you to identify and remove business-critical and PII/PHI information, and prevents it from landing in the wrong hands, which could result in irreparable damage to your business.

### AI-Powered to Eliminate Unnecessary Work

As reviewers begin reviewing, Venio Review's CAL capability uses a machine-learning engine to reduce case data by up to 90% to surface what matters most in your case or investigation. Email thread views empower you to easily identify missing or deleted email content, while our social network diagram provides a broad visualization of communications with the ability to drill down into individual conversations. Auto-collection enables tiered reviews, and logical tagging makes legal review teams more productive and efficient.

## Interactive Analytics for Actionable Insights

Venio Review analytics dramatically reduce costs by both decreasing the amount of data moved into review and providing additional tools for reviewers.

Gain immediate insights and enable rapid ECA and culling through interactive, customizable widgets and layouts. Sample data to ensure your collection is complete and that strategies are working. Visualize the flow of email communications and merge duplicate email addresses before drilling into the details. Identify key custodians or actors, potential alias email addresses, and time gaps by using our interactive Timeline and Social Network Diagram, a spider-web view of interconnected email nodes.

## Customizable UI for Ease-of-Use

Venio Review is highly customizable, comes with templated review sets and screen layouts for various case types, roles, and tasks, and streamlines setup workflows for project managers. Its highly responsive interface and accelerated doc-to-doc speed lead to faster and better results for your review teams, which ultimately improve the trial or investigative team's strategy development for improved outcomes.

## Flexible Licensing and Deployment Model for Reduced Costs

Venio Review is designed to support individual cases that are housed in different locations. This gives you the flexibility to choose where your data is located based on the individual case requirements: cloud, on-premises, or a hybrid approach. A flexible, subscription-based license, which isn't based on a per-user model, allows you to license only what you need when you need it. With project-based payment options, your use of Venio Review can grow along with your business.
